Kasaragod, Kerala, India, 671124 | +91-7012638772 | manasaradhakrishnas@gmail.com | linkedin.com/in/Manasa-R-Krishna | github.com/manasarkrishna

SUMMARY

Information Science graduate with hands-on experience in data analysis and business intelligence through internships and projects. Skilled in SQL, Python, Excel, Power BI, and Tableau, with a focus on data-driven insights and business reporting.

EDUCATION

Sahyadri College of Engineering and Management <i>Bachelor of Engineering in Information Science — CGPA: 8.66</i>	Nov 2022 - Jun 2026 <i>Mangalore, Karnataka</i>
Kendriya Vidyalyaya No. 1 CPCRI <i>PCMB — 91.8%</i>	2020 - 2022 <i>Kasaragod, Kerala</i>

TECHNICAL SKILLS

Data Analysis: SQL, Excel, Power BI, Tableau, DAX, Data Visualization, Exploratory Data Analysis (EDA), Data Cleaning, Data Quality, KPI Development, Reporting, Data Interpretation, Cohort Analysis, Funnel Analysis, Trend Analysis, Variance Analysis, Segmentation, Forecasting

Programming: Python, Pandas, NumPy

Databases: PostgreSQL, MySQL, Data Modeling, Joins, Aggregations, Subqueries, Common Table Expressions (CTEs), Window Functions

Machine Learning: scikit-learn, Predictive Modeling, Logistic Regression, Classification, Model Evaluation, Feature Engineering

Tools: Git, GitHub, Postman, VS Code, Docker

EXPERIENCE

Software Engineering Intern <i>Zynthora AI</i>	Jan 2026 - Jun 2026 <i>Remote</i>
- Developed frontend components for Melixa, an AI-powered music mood prediction and recommendation platform using React.js, and integrated them with backend APIs. - Collaborated with AI and development teams to implement features, validate API communication, and improve application usability. - Performed manual testing, API validation, bug identification, and debugging across frontend and backend modules to improve software reliability.	

PROJECTS

ChurnWatch Customer Retention & Churn Risk Analytics <i>PostgreSQL, Pandas, scikit-learn, Power BI, ML, Git</i>	2026
- Built a customer churn analytics pipeline in PostgreSQL, integrating 7,500+ customer records across 3 relational tables using CTEs, LAG, and ROW_NUMBER to model customer lifecycle states and identify engagement trends; found customers with 2+ consecutive months of declining engagement churned at 3x the baseline rate (58% vs. 18%). - Developed and evaluated a logistic regression churn prediction model in Python (scikit-learn), achieving 72.8% recall and correctly identifying 69.6% of at-risk revenue in backtesting; benchmarked against a rule-based scoring model using precision, recall, and F1-score, improving recall by 10 percentage points. - Designed a 4-page interactive Power BI dashboard using DAX, conditional formatting, and customer segmentation to visualize churn KPIs and prioritize retention actions; translated analytical findings into actionable retention recommendations supported by technical documentation and reproducible Git/GitHub workflows.	
SalesSight 360 Multi-Channel Revenue Analytics Platform <i>Python, PostgreSQL, SQL, Tableau</i>	2026
- Built an end-to-end sales analytics platform (Python, PostgreSQL, SQL, Tableau) processing 8,000+ CRM records across a 5-table star schema, identifying a 71-74% pipeline forecast overstatement and enabling a \$419,995 revenue analysis for leadership decision-making. - Engineered a PostgreSQL star schema (5 dimension tables, 2 fact tables, enforced FK constraints) from a messy synthetic CRM dataset, building an automated ETL pipeline in Python (pandas, SQLAlchemy) to deduplicate, standardize, and validate 8,000+ records. - Implemented a 14-check automated QA/data-validation framework (referential integrity, grain uniqueness, range checks, business-logic plausibility) that caught and fixed a real sign-propagation bug affecting downstream revenue calculations.	

CERTIFICATIONS & VIRTUAL EXPERIENCE

- Cisco Networking Academy - Data Analytics Essentials, 2026
- Deloitte - Data Analytics Virtual Experience Program, Forage, 2026
- Data Analytics Program — Persevox, 2026
